

# More efficiency and scalability with the PAIR Finance REST API.

## Simple casefile management.

Manual, inconvenient processes cost several hours every day. That's why we give our corporate customers the opportunity to automate the exchange of case files and their processing. This speeds up real-time data transfer and provides you with the smoothest and most efficient process in collections and receivables management. It is simple and takes little time to get started with the implementation. Get to know the PAIR Finance REST API.

Client

REST API

PAIR Finance Platform

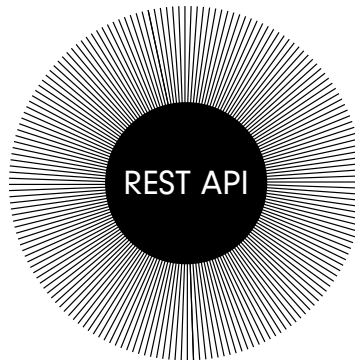

### Superior collaboration.

Daily data exchange on a detailed case file, or holistic case file list level.

The details of the open claim can be queried at any time and transferred to your system.

Add individual data points and documents easily to your open claims.

Easy and fast integration with customer systems.

### Security.

Full protection during data exchange: end-to-end HTTPS data encryption.

Production-like test environment: check all functionalities before your go-live.

Security mechanism: faulty data is automatically rejected.

### What is an API?

The abbreviation REST API stands for "Representational State Transfer - Application Programming Interface" and is a programming interface. This serves as a „bridge“ between two companies via which data is sent back and forth.

### Easier to scale.

Simplicity and standardisation of case file transfer saves time.

Supports transfer of large data volumes.

Unlimited scalability for large volumes.

**„The handover of customer cases was always associated with a high level of manual effort. With the help of PAIR Finance, case handover now takes place flexibly and automatically. The technical integration of the PAIR Finance API was quick and easy.“**

Bernd Oehlen, Senior Manager Finance-Operations **nexible**
